

Chapter VIII

<http://www.onerba.org> in 2006

ONERBA's website has for objectives:

- to facilitate the diffusion of ONERBA's statistical data on bacterial resistance to antimicrobials to whom is concerned, and especially Health Authorities and clinicians involved in antimicrobial prescription;
- to disseminate methodological guidelines for surveillance of bacterial resistance;
- to participate, through the English part of the website, to the European debate on bacterial resistance to antimicrobials;
- to help networks to communicate.

During the year 2006, the website has been updated, especially by adding, in ONERBA's electronic database, data validated during the year by the Scientific Board and slides of presentations given during sessions organised by ONERBA's scientific Board in different meetings.

The graph shows statistics on website's visits. The mean number of visit is around 1200 / month, i.e. a 20% increase each year since 2004.
